

# International Isotope Society Central European Division

Dear Colleagues,

you are cordially invited to participate at the 14th Workshop of the International Isotope Society, Central European Division which will be held in Bad Soden, Germany, from June 21 to June 22, 2007.

The meeting will focus on the synthesis and applications of isotopes and isotopically labelled compounds. This includes all aspects of synthesis, analytics and applications of radioactive and stable isotopic labeled compounds as well as radioactive storage management and waste disposal. Three plenary lectures will highlight recent advances and new synthetic approaches for the synthesis of small molecules and modern chemistry that will be very valuable for isotopic labelling.

We are very pleased and excited that a number of prominent scientists already accepted to give a presentation. However, we would like to ask you to contribute to this workshop. Please find enclosed the first circular for more details.

As in the past year a poster session and vendor exhibition will be organized in a way to provide the opportunity for discussions and new collaborations.

To keep this internationally renowned workshop on a high scientific level with invited speakers from academia and industry and to enable student participation we would like to ask you to join us in financial support of this meeting. All donors will be publicly acknowledged in workshop correspondence and during the workshop days.

**Please note that this time the conference dinner will be held outside of the conference site. Due to the limitation of transport and logistics we were forced to limit the number of participants to sixty. We will handle the incoming dinner registrations on a first come, first served basis (date of payment!).**

For a detailed report on the very recent meeting see also the web site of the international isotope society - central european division: <http://www.iis-ced.de>.

Please feel free to forward this message to all scientists involved or interested in radiochemistry.

The Organisation Committee  
**Volker Derdau & Jens Atzrodt**
